

Varaxon

LIGHTED DANCE FLOORS

DESCRIPTION:

VARAXON offers a complete system of pre-assembled and tested floor and wall display modules which are directly compatible with the 883 Memory Controller.

In operation they will produce approximately 256,000 graphic and geometric pattern/color combinations.

All displays are pre-assembled in our factory using pneumatic assembly tools and the latest industrial assembly techniques.

All wiring and fixtures used are UL and CSA approved devices. All wiring is in metal raceway and all interconnections are via multiple pin industrial type connectors. Long-life transparent color-dipped bulbs are standard with a minimum rated life of 3,000 actual usage hours.

All modules plug together to minimize display assembly time. (With proper site preparation, the typical on-site installation time for a 16' x 32' floor is less than 8 hours.)

Complete applications engineering assistance is available from the factory for custom displays.

SPECIFICATIONS:

- 256,000 Pattern/Color Combinations
- Totally automatic operation with 883 controller
- Modular construction for ease of installation
- Industrial grade materials throughout
- Durable 1/2" acrylic top surface
- UL and CSA approved wiring devices
- All wiring in metal raceway
- Safety protection via GFI circuit breakers
- Low power consumption
- Isolated power electronics
- Long-life transparent color-dipped lamps
- US and international voltage versions
- Award winning design
- Custom systems available to suit you specific needs
- Companion wall displays can operate from same controller
- Any size available in 8' x 8' increments
- Portable versions available (call for details)
